

G Performer 6.0 *Efficiency and hardiness*

Maintain
a high
health
status

World leader in biosecurity for more than 25 years, Genetiporc is producing high health terminal boars in order to protect its customers from primary disease introduction and their associated economic impacts, reducing mortality cost and lost productivity.

Combining performance and hardiness

The G Performer 6.0 boar has been developed to produce high carcass yielding pigs with extra kilograms of paid lean yield. The specific traits of this boar allow for excellent hardiness in all types of growing conditions with low mortality thereby maximizing production revenue.

Reduce feed cost

The G Performer 6.0 is the solution for reducing production costs through significant feed conversion improvement. Combined with additional lean yield meat production this boar line is a significant advantage to swine producers and processors alike.
