

# V-300

## Maximize growth

World leader in biosecurity for more than 25 years, Genetiporc is producing high health terminal boars in order to protect its customers from primary disease introduction and their associated economic impacts, reducing mortality cost and lost productivity.

### Maximize gain and minimize mortality

The Duroc line is oriented towards optimal growth improvement and feed conversion reduction. The exceptional hardiness of the Duroc V-300 allows it to perform in many different herd environments with low mortality thereby maximizing #1 pigs to the plant.

### An adapted pig to the market need

The V-300 boar produces pigs with an optimal fat level combined with excellent loin eye with no compromise on meat quality in terms of color or intramuscular fat requested by the processor.

## CROSSBREEDING PROGRAM

**Fertilis 25**  
Commercial  
Female

**Fertilis 40**  
Commercial  
Female
